

Government High School kids visiting Chemistry labs

Jan. 03, 2018

More than 150 High school Students from several nearby Government Schools of Indore visited the Discipline of Chemistry on January 03, 2018 for laboratory tour. With an aim to give a sense of Chemistry laboratories, we make these school kids to visit all our Chemistry laboratories. Good to see that most of these students are girls.

These kids are probably experiencing for the first time such chemistry laboratories, and we found them very excited. Interestingly, most of the students are relating the content of their chemistry curriculum with laboratory equipments/chemicals/glasswares.

Our PhD and MSc students very patiently tried to answer all the curious queries of these lovely kids. Kids were demonstrated the working of fumehood, rotary evaporator, column chromatography, TLC plates and so on.

It was nice to interact with these young minds – hope we were able to inspire some of them to do Chemistry and good Science in future !!!
